

PINE WINDOWS

WARMTH

The most popular coniferous species used in the production of wooden joinery, pine wood is durable, robust and easy to manufacture. Because of its availability and price, it is often chosen by consumers. It is a species with a high tolerance to environmental factors and temperature. It adapts perfectly to extreme climate conditions and its high resin content, makes it resistant to moisture. Easy impregnation allows it to darken sufficiently to achieve a natural-looking light yellow tint, while maintaining the visibility of the wood grain. For whom: For strong lovers of this species who value high quality at an affordable price. The average wood density: 510 kg/m³.

MERANTI WINDOWS

DESIGN

It is the current trend in the production of our wood joinery. It comes in many varieties, including the most popular – a red one (often mistaken for mahogany) and a white one. It is resistant to moisture and reaches very good thermal insulation parameters and acoustic ones. It has highly distinctive features of wood, which gives it a unique character. It perfectly combines functionality and durability with aesthetics and elegance. For whom: The windows of Meranti, is the choice for those seeking a combination of exotic aesthetics, with high quality and durability of products, at an affordable price. The average wood density: 590kg/m³.

OAK WINDOWS

DURABILITY

This wood has become a symbol of durability, strength and solidity. It is classified as being a precious species, with impressive durability and strength. Its qualities were already appreciated in ancient times. The colours of oak are intense brown, in a large number of hue gradations. Under the influence of sunlight, it gets slightly darker and gains depth. It combines elegance with great availability. It does not deform and is not subject to biological corrosion. Even without being impregnated, it is resistant to pests. Oak is a tree for people with ecological inclinations who value natural micro climate and interior aesthetics, and want to enjoy good windows for many years. It is well-suited for both traditional and modern interiors. The average wood density: 850kg/m³.

Wooden profiles we obtain only from certified sources of origin of the raw material.

NEED WINDOWS TO BECOME, A PART OF **THE FAMILY?**

ECOLINE 68

- ✓ Standard width of the profile dedicated for Spanish weather conditions.
- ✓ Window type suitable for flats, apartments and houses
- ✓ Smooth finish and delicate, universal line of window

ECOLINE 68 RETRO

- ✓ Distinguished by classic finishes windows profile
- ✓ Ability to reproduce historical joinery
- ✓ Windows are old-style constructions: wooden columns and decorative moldings

Choose Ecoline 68 if you care about natural beauty of wooden in your home. Even the best wood-like veneer isn't going to match warmth of timber

WHY OUR WINDOWS ARE **WELL THOUGHT?**

Window profiles are made from glued three-layer timber.

Thanks to it, your window will not deform and lose its advantageous parameters.

We impregnate wood before connecting profiles.

It is therefore so resistant to moisture in window corners

We use supreme class MACO Multimatic fitting.

Microventilation, anti-draft system, mishandling lock and rotary bulgary bolts are already our standard.

Each wooden window comes with solid aluminium drip for frame and sash with seal, which is not only beautiful appearance, but effectively protects the wood from accumulating water.

Our wooden windows do not need to be painted every few years.

Enough, that twice a year when washing windows, wipe it with a sponge for impregnation. It is very easy!

MAYBE YOU NEED WINDOWS WITH **BEST PERFORMANCE PARAMETERS?**

THERMOLINIE 78

- ✓ Thicker Window profile of 78 mm dedicated for housing
- ✓ More durable design, better thermal insulation and increased soundproofing
- ✓ Enhanced with triple-glazed unit of $U_g=0,7 \text{ W/m}^2 \text{ K}$

ECOTHERM 92

- ✓ Built for energy efficient home
- ✓ Solid 92 mm thick profile with high rigidity + triple-glazed unit
- ✓ Best insulation performance and lowest heat transfer coefficient

! Passive window
